Comprehensive Services Offering

Deployed separately or in tandem, our suite of managed solutions covers a wide range of data security needs:

Authentication

- An on-demand two-factor authentication solution
- Couples digital certificates with an organization's existing VPN infrastructure
- Satisfies PCI DSS requirement 8.3

Data Loss Prevention

- Data security experts monitor network events 24x7x365 to identify abnormal events, sift out false positives and notify administrators if necessary
- End-point compliance checks
- Always-on threat detection and mitigation
- Automated remediation

Network Security Monitoring

- Immediate notification keeps your organization up-to-date on network events
- Mitigates threats before they impact your operations

Unified Threat Management

- Firewall, intrusion prevention, anti-virus and Virtual Private Network (VPN) seamlessly integrated
- Supports PCI DSS compliance for franchise or retail locations, branch offices and medium businesses
- Ongoing firewall device and patch management
- External scanning across your IP addresses from outside the network
- Internal Vulnerability Scanning scans your network from behind the firewall
